

CAREWEBQI VERSION 3.0

CareWebQI® Version 3.0 takes an important step forward in overall user experience with enhanced usability for clients; easier customization; and an improved and certified technological foundation. A sweeping list of feature additions and improvements includes new reporting, guideline and migration tools that will help *CareWebQI* users continue to document, track and improve quality of care.

Major enhancements to *CareWebQI* include:

Technology

Technological Best Practice Certified – National Institute of Standards and Technology (NIST) compliance has been completed. This rigorous certification helps ensure security and consistency with best practice.

Expanded Range of Interface Elements – The number of fields accepted in API data transfers has been expanded, additional HL7 message types are supported, as are customized workflows when *CareWebQI* is integrated with third-party systems.

- Enable more robust connectivity
- Improve reporting and functionality
- Support patient record merging
- Use role-customized CareFlows

Customization

Expanded Guideline Modification Functions – Clinical editors can be more specific in their guideline creation and make their modified content easier to use.

- Activate or deactivate links
- Customize definitions
- Reactivate guidelines without Milliman support
- Create customized sections
- Edit informational sections and add static notes

New Migration Tool for Customization and Testing –

This tool enables clients to more easily migrate customized guidelines and other customizations, confidently updating their production environment after testing.

- Easily test and migrate modified guidelines
- Apply to variances, discharge destinations and more
- Create test environments for new application settings

Usability

Easier-to-Use Standard Reporting – Improved, easier-to-use tools are now presented according to user role, for greater efficiency.

- Quickly access reports specific to role, episode and patient
- Run reports on specific dates or intervals
- Customize standard reports on-the-fly with new fields
- Expand and collapse groups of data, from summary to detail
- Export to Excel, .CSV, .PDF, .MDF formats

Powerful Reporting Tools for Advanced Use – Users enjoy greater flexibility and speed as they develop and modify more sophisticated reports.

- Create, copy or modify standard report set
- Use prepared reporting views to assist in new report creation
- Access bar, line and pie charts with every report

Enhanced Notes Create More Valuable Data – Document and categorize more specific, comprehensive information, creating more valuable, detailed data for management review and reporting

- Categorize notes with customizable drop down lists
- Document against guidelines even when indications are not met
- Enter notes for Episode Overviews when no guidelines apply
